THE EDGE — BUYING CYCLE BOTTOMS

Strategy bought near the bottom of every major BTC dip since 2020

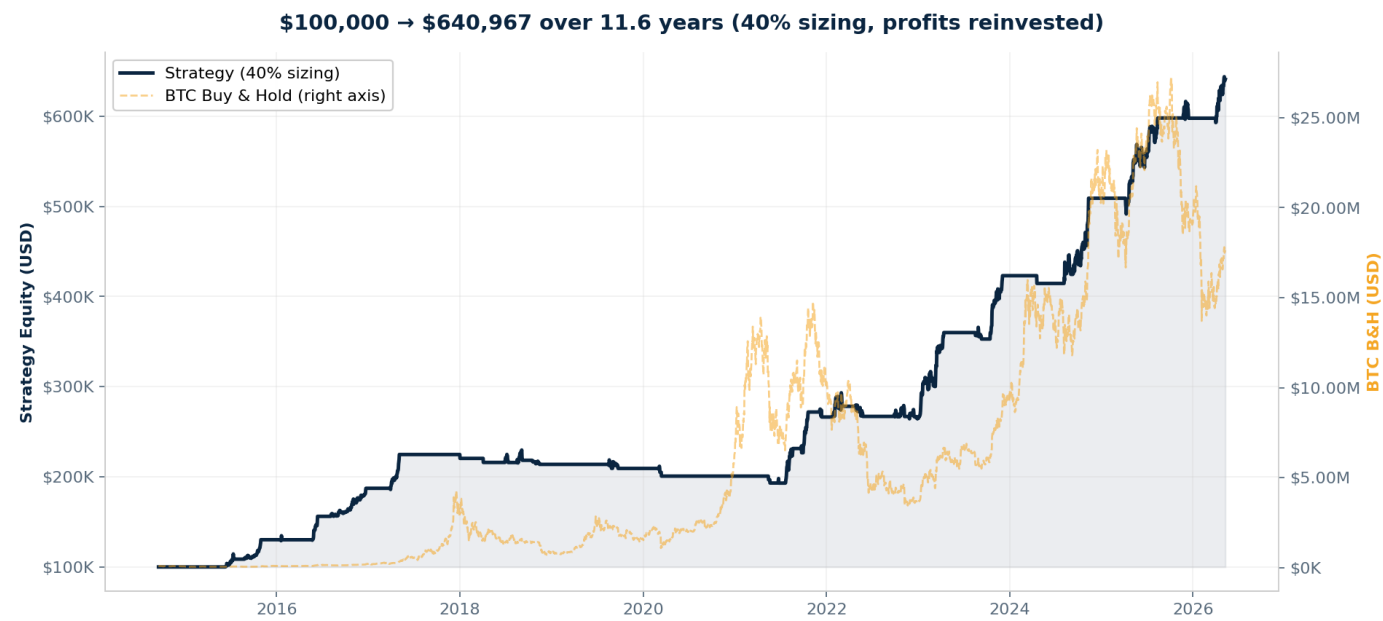

Recent bottom-picks captured:

- March 2020 — bought during COVID crash at \$5,200, BTC rallied +122% within 6 months
- November 2022 — bought during FTX collapse at \$16,604, BTC rallied +87% within 6 months
- October 2023 — bought at \$28,519, take-profit hit +50% in 7 weeks
- September 2024 — bought at \$57,649, take-profit hit +50% in 9 weeks
- April 2025 — bought at \$79,626, take-profit hit +50% in 18 weeks

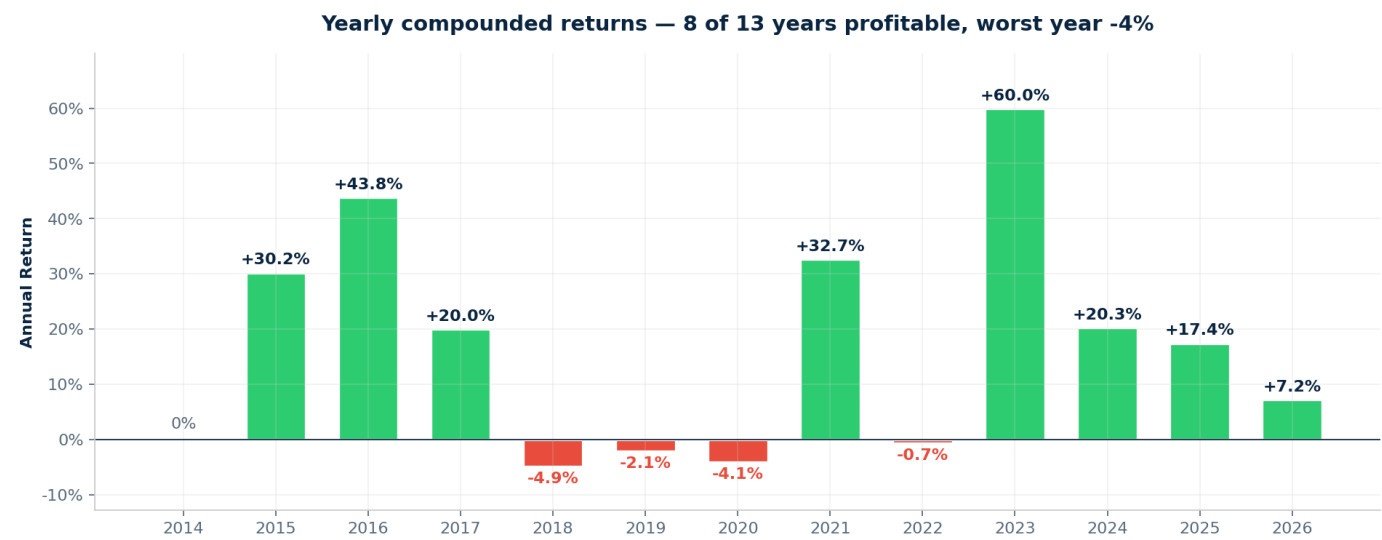

EQUITY GROWTH

\$100,000 compounded into \$640,967 over 11.6 years — entirely from BTC entries, fully reinvested.

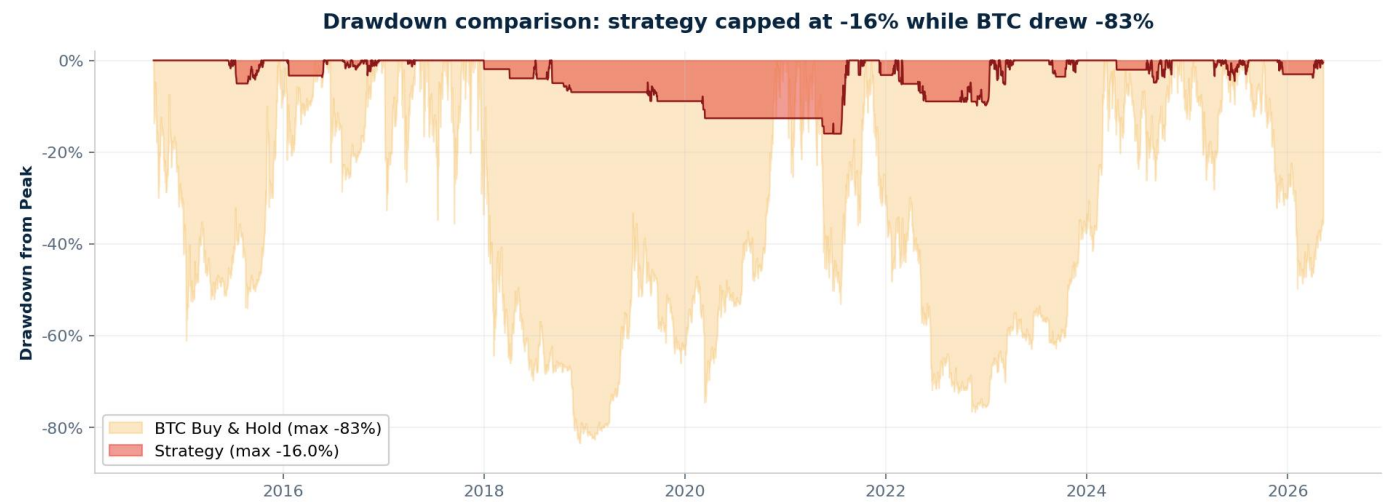

YEAR-BY-YEAR

8 of 13 years profitable. Every losing year capped at small single-digit losses. Every winning year compounds into the next.

DRAWDOWN — RISK SIDE

Strategy drawdown stayed inside -16% throughout the period, vs BTC Buy & Hold which drew down -83%. This is the core value proposition: BTC upside without BTC downside.

SIZING VARIANTS

Same trade logic, three risk levels. Sharpe ratio stays near 1.4 across all three — the strategy scales linearly.

Variant	Per-Trade Sizing	Annual Return	Max Drawdown	\$100K → 11.6 yr
Conservative	20%	+8.7%	−8.3%	\$264K
Standard	40%	+17.3%	−16.0%	\$641K
Aggressive	75%	+31.9%	−27.8%	\$2.52M

Bold row is the variant reported on the headline page. Selecting between variants is a function of risk tolerance, not strategy quality.
